Re: **September 15, 2001 Progress Report**
J. H. Baxter Arlington Facility
Docket No. RCRA-10-2001-0086
7026-20

Dear Ms. Ogle:

This letter provides the September 15, 2001 progress report for work completed under the Administrative Order on Consent (AOC) for the J. H. Baxter facility during the period August 7, 2001 to September 15, 2001.

SIGNIFICANT DEVELOPMENTS THIS PERIOD

This section discusses all significant developments for the referenced reporting period, including actions performed and any problems encountered relative to work required by the Order. Significant developments that occurred on this project during this reporting period include:

- We received a draft sub-set of comments from EPA on the Site Investigation Work Plan on September 4, 2001.
- On September 10, 2001 we received a request from EPA to collect split samples during the next round of drinking water well sampling. The AOC and Drinking Water Work Plan require sampling approximately 6 months from the last sampling (conducted on June 26, 2001). Because this time period occurs during the Christmas holiday, we mutually agreed to conduct the sampling during the second week in January 2002.
- On September 10, 2001 we received EPA's partial disapproval of the Excess Stormwater Management Work Plan requiring submittal of a Revised QAPP for the Excess

EPA
September 14, 2001

7026-20
Page 2

Stormwater Management Work Plan. Other elements of the system design and construction were approved, and design work has thus begun.

- We are still awaiting Ecology's approval of the contained-in determination, however, we understand that this will forth be coming upon EPA's approval of the Excess Stormwater System.

ANTICIPATED DEVELOPMENTS NEXT PERIOD

This section discusses developments anticipated during the next reporting period and includes a schedule of actions to be performed.

- With approval of the excess stormwater system design work we are planning to complete the infiltrometer tests during the Week of September 16, 2001. These data will be used to complete the hydrologic analysis of the site and locate the infiltration areas. We have excluded the infiltration area along the south-eastern boundary of the site based on review of the available water level data, which indicates that water levels may come within 4 to 5 feet of ground surface in this area during wet winter months.
- We will be revising the QAPP for the Excess Stormwater Management System in accordance with Enclosure A of EPA's partial disapproval of the Excess Stormwater Management Work Plan. We have requested an extension to the requirement for this plan to be submitted within 15 days. If EPA grants the extension, the QAPP will be re-submitted on October 15, 2001.
- We are currently working to schedule a meeting with EPA to discuss the conceptual site model, data upon which the conceptual model is based, and the proposed work plan proposed to fill data gaps.

ANTICIPATED PROBLEMS AND PROBLEM RESOLUTION

This section discusses anticipated problems, and planned resolution of past or anticipated problems.

Other than the request for a 20-day extension on the required submittal date for the ESWMWP QAPP, there are no anticipated problems to report.

EPA
September 14, 2001

7026-20

OTHER INFORMATION

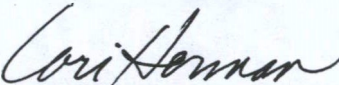

Any other information relevant to the Order is discussed in this section, including results of any sampling or testing completed within the reporting period.

- The results of the July 2001 groundwater sampling conducted as part of the State Waste Discharge permit are included as Attachment A to this letter.

We trust this letter meets the intent of the Progress Report per Paragraph 71 of the AOC. Please let us know if you have any questions or comments on the work conducted to date or contents of this report.

Sincerely,

HART CROWSER, INC.

LORI HERMAN
Principal Hydrogeologist

CHEMICAL DATA QUALITY REVIEW

Fairbanks

Eighteen groundwater samples (including three field duplicates and three field blanks) collected from the J.H. Baxter Arlington facility on July 9 - 12, 2001 were submitted to Columbia Analytical Services for analysis. Samples were analyzed for pentachlorophenol, dissolved metals, suspended solids, and conventional groundwater quality parameters (pH, conductivity, chloride, sulfate, nitrate, nitrite, ammonia, total organic carbon, total dissolved solids, chemical oxygen demand), tanins/lignins, and total coliform. The laboratory reported results as batches K2104874, K2104907, K2104914, and K2105011.

Jersey City

Juneau

Quality assurance/quality control (QA/QC) reviews of laboratory procedures were performed on an ongoing basis by the laboratory. Hart Crowser performed the data review, using laboratory quality control results summary sheets and raw data, as required, to ensure they met data quality objectives for the project. Data review followed the format outlined in the National Functional Guidelines for Organic Data Review (EPA 1994) and the National Functional Guidelines for Inorganic Data Review (EPA 1994) modified to include specific criteria of the individual analytical methods. The following criteria were evaluated in the standard data quality review process:

Long Beach

Portland

- Holding times;
- Method blanks;

Seattle

J.H. Baxter
August 29, 2001

7026-03
Page 2

- Laboratory and field blank samples;
- Surrogate recoveries, when applicable;
- Laboratory and field duplicate samples; and
- Reporting limits.

The data were determined to be acceptable for use, with certain qualifiers. Results of the data reviews, organized by analysis class, follow.

Conventional Groundwater Parameters

Sample Preservation and Holding Times

The samples were collected in pre-preserved bottles. The temperature for BXN samples as received by the laboratory, were within the limits of 2 to 6 °C. BXN and BXS samples for total coliform and pH analysis were received several hours past the 24-hour holding time limit. Coliform and pH results were qualified as estimated (J). Coliform results may exhibit a high bias.

Laboratory Detection Limits

The laboratory achieved specified detection limits. Reported detection limits and analytical results were adjusted for any required dilution factors.

Blank Contamination

No target analytes were detected in laboratory blanks. Samples BXN-6 and BXS-5 were submitted to the laboratory as blind field blanks. Field blank sample BXN-6 contained 1.57 mg/L of ammonia. Sample results for this analyte were qualified as non-detected when sample concentrations were less than five times the concentration in the associated blanks.

Duplicate Sample Analysis

Sample BXN-5 was submitted to the laboratory as a "blind" duplicate of sample BXN-1 while BXS-6 was a duplicate of BXS-1. The relative percent difference between duplicate measurements was within QC criteria for analytes except conductivity and ammonia for samples BXN-1 and BXN-5, which had relative percent differences of 158 and 165 percent, respectively. Results for these analytes were qualified as estimated (J) for samples BXN-1 and BXN-5.

J.H. Baxter
August 29, 2001

7026-03
Page 3

Metals

Sample Preservation and Holding Times

The samples were collected in pre-preserved bottles. The samples were prepared and analyzed within holding time limits of 6 months.

Laboratory Detection Limits

The laboratory achieved specified detection limits. Reported detection limits and analytical results were adjusted for any required dilution factors.

Blank Contamination

Samples MWB, BXN-6 and BXS-5 were submitted to the laboratory as blind field blanks. No target analytes were detected in laboratory or field blanks

Duplicate Sample Analysis

Sample BXN-5 was submitted to the laboratory as a "blind" duplicate of sample BXN-1, BXS-6 was a duplicate of BXS-1, and MWA was a duplicate of MW2. The relative percent difference between duplicate measurements met quality control limits of less than 35 percent for analytes.

Pentachlorophenol

Sample Preservation and Holding Times

Samples were preserved by cooling to 4 °C. The samples were extracted and analyzed within holding time limits of 7 and 40 additional days.

Laboratory Detection Limits

The laboratory achieved specified detection limits. Reported detection limits and analytical results were adjusted for any required dilution factors.

J.H. Baxter
August 29, 2001

7026-03
Page 4

Calibration

The laboratory noted that the continuing calibration criteria were not met for the second, confirmation column. Results were reported using concentrations obtained from the primary column. No data qualification was required.

Blank Contamination

Sample MWB was submitted to the laboratory as a blind field blank. No target analytes were detected in laboratory or field blanks.

Surrogate Recovery

The surrogate compound recoveries were within laboratory QC limits.

Duplicate Sample Analysis

Sample MWA was submitted to the laboratory as a "blind" duplicate of sample MW2. The relative percent difference between duplicate analyses was within QC limits of less than 35 percent.

Re: Permit Monitoring Wells

Dear Richard:

Enclosed are the results of the sample(s) submitted to our laboratory on July 14, 2001. For your reference, these analyses have been assigned our service request number K2105011.

All analyses were performed according to our laboratory's quality assurance program. All results are intended to be considered in their entirety, and Columbia Analytical Services, Inc. (CAS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report.

Please call if you have any questions. My extension is 3345.

Respectfully submitted,

Columbia Analytical Services, Inc.

Mingta Lin
Project Chemist

Service Request No.: K2104914
K2105011
Date Received: July 11 & 14, 2001

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS). This report contains analytical results for samples designated for Tier I data deliverables. When appropriate to the method, method blank results have been reported with each analytical test. Surrogate recoveries have been reported for all applicable organic analyses.

Sample Receipt

Seven water samples were received for analysis at Columbia Analytical Services on July 11 & 14, 2001. The samples were received in good condition and consistent with the accompanying chain of custody form. The samples were stored in a refrigerator at 4°C upon receipt at the laboratory.

Inorganic Parameters

No QA/QC anomalies were observed during the analysis of these samples.

Dissolved Metals

No QA/QC anomalies were observed during the analysis of these samples.

Pentachlorophenols by EPA Method 8151M

CCV Exceptions:

The analysis of Pentachlorophenol requires the use of dual column conformation. When the CCV criterion is acceptable for both columns, the higher of the two results is generally reported. If one of the CCV's is outside of the control criteria, results are reported from the column with a CCV with acceptable criterion.

The primary evaluation was not met on the confirmation column for Pentachlorophenol in the following Continuing Calibration Verifications CCV 0719F029. Results for this analyte has been reported from the other column. The data quality has not been affected. No further corrective action was necessary.

Re: J.H. Baxter & Co./BXS/BXN Wells

Dear Richard:

Enclosed are the results of the sample(s) submitted to our laboratory on July 10, 2001. For your reference, these analyses have been assigned our service request number K2104874.

All analyses were performed according to our laboratory's quality assurance program. All results are intended to be considered in their entirety, and Columbia Analytical Services, Inc. (CAS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report.

Please call if you have any questions. My extension is 3345.

Respectfully submitted,

Columbia Analytical Services, Inc.

Mingta Lin
Project Chemist

Service Request No.: K2104874

Project: BXS/BXN Wells

K2104907

Sample Matrix: Water

Date Received: July 10 & 11, 2001

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS). This report contains analytical results for samples designated for Tier I data deliverables. When appropriate to the method, method blank results have been reported with each analytical test. Surrogate recoveries have been reported for all applicable organic analyses.

Sample Receipt

Twelve water samples were received for analysis at Columbia Analytical Services on July 10 & 11, 2001. The samples were received in good condition and consistent with the accompanying chain of custody form. The samples were stored in a refrigerator at 4°C upon receipt at the laboratory.

Inorganic Parameters

The samples were received past the recommended holding time of 24 hours for Total Coliform and pH analysis.

No QA/QC anomalies were observed during the analysis of these samples.

Dissolved Metals

No QA/QC anomalies were observed during the analysis of these samples.
